

TAC's Campaigns

NB: We have planned major improvements to the campaigns part of the website.

TAC campaigns for access to medicines for all people with HIV, to prevent new HIV infections and for a better public health system. We run a large treatment literacy programme, which provides scientifically accurate information to people with or at risk of HIV, their family, friends and supporters on the prevention and treatment of HIV. We also run a women's health campaign, an international solidarity campaign (whose current focus is on health in Zimbabwe) and a people with HIV mobilisation campaign. TAC has a policy, communications and research department, whose aim is to develop and provide scientifically accurate information about the epidemic to all people.
